FIELD NOTES

OF THE

DEPENDENT RESURVEY

OF

A PORTION OF THE FOURTEENTH STANDARD PARALLEL NORTH,

THROUGH RANGE 76 WEST,

A PORTION OF THE SOUTH BOUNDARY,

THE EAST BOUNDARY,

AND

A PORTION OF THE SUBDIVISIONAL LINES,

TOWNSHIP 56 NORTH, RANGE 76 WEST,

SIXTH PRINCIPAL MERIDIAN,

IN THE STATE OF WYOMING.

EXECUTED BY

BRUCE M. MORTIMER

CADASTRAL SURVEYOR

MARK L. BUSH

CADASTRAL SURVEYOR

Under Special Instructions dated FEBRUARY 12, 1988, approved FEBRUARY 12, 1988, which provided for the surveys included under Group Number 511, and assignment instructions dated AUGUST 16, 1988, and APRIL 28, 1989.

Survey commenced SEPTEMBER 20, 1988

Survey completed SEPTEMBER 27, 1989

CHAINS

The following field notes are those of the dependent resurvey of a portion of the Fourteenth Standard Parallel North, through Range 76 West, a portion of the south boundary, the east boundary and a portion of the subdivisional lines, Township 56 North, Range 76 West, Sixth Principal Meridian, Wyoming.

Charles Holcomb surveyed the Fourteenth Standard Parallel North (north boundary), the Ninth Auxiliary Meridian West (west boundary), the remaining exterior boundaries and the subdivisional lines in 1883. Mark M. Kelley dependently resurveyed the west boundary in 1914. William H. Clark performed a retracement and restoration of the Fourteenth Standard Parallel North in 1917, establishing angle points to restore the original corner positions. Russell C. McDonald dependently resurveyed portions of the south boundary and the subdivisional lines in 1947.

The survey was executed in accordance with the specifications as set forth in the Manual of Surveying Instructions, 1973, and the Special Instructions for Group No. 511, Wyoming, dated February 12, 1988.

Preliminary to the resurvey, the lines of the previous surveys were retraced and diligent search was made for all corners and other calls of the field note record. Identified corners were remonumented in their original positions; lost corners were reestablished and monumented at proportionate positions based on the latest official record, but only after exhausting every possibility of finding direct evidence of such corners. The retracement data was thoroughly verified and only true line field notes are given herein, which refer to the completed survey.

The survey was executed with a WILD Model T16 total station, a WILD Model DI4L electronic distance meter and by chaining methods. The instruments were maintained in proper adjustment at all times. The directions of all lines refer to the true meridian, determined by hour angle observations of the sun at various points along the lines of survey and carried forward by sustained angulation.

The geographic position of the southeast corner of the township, based on NAD 27 and determined by satellite positioning methods, is:

Latitude 44° 46' 46.41" N. and Longitude 105° 56' 36.73" W.

The mean magnetic declination is 12½° E.
